
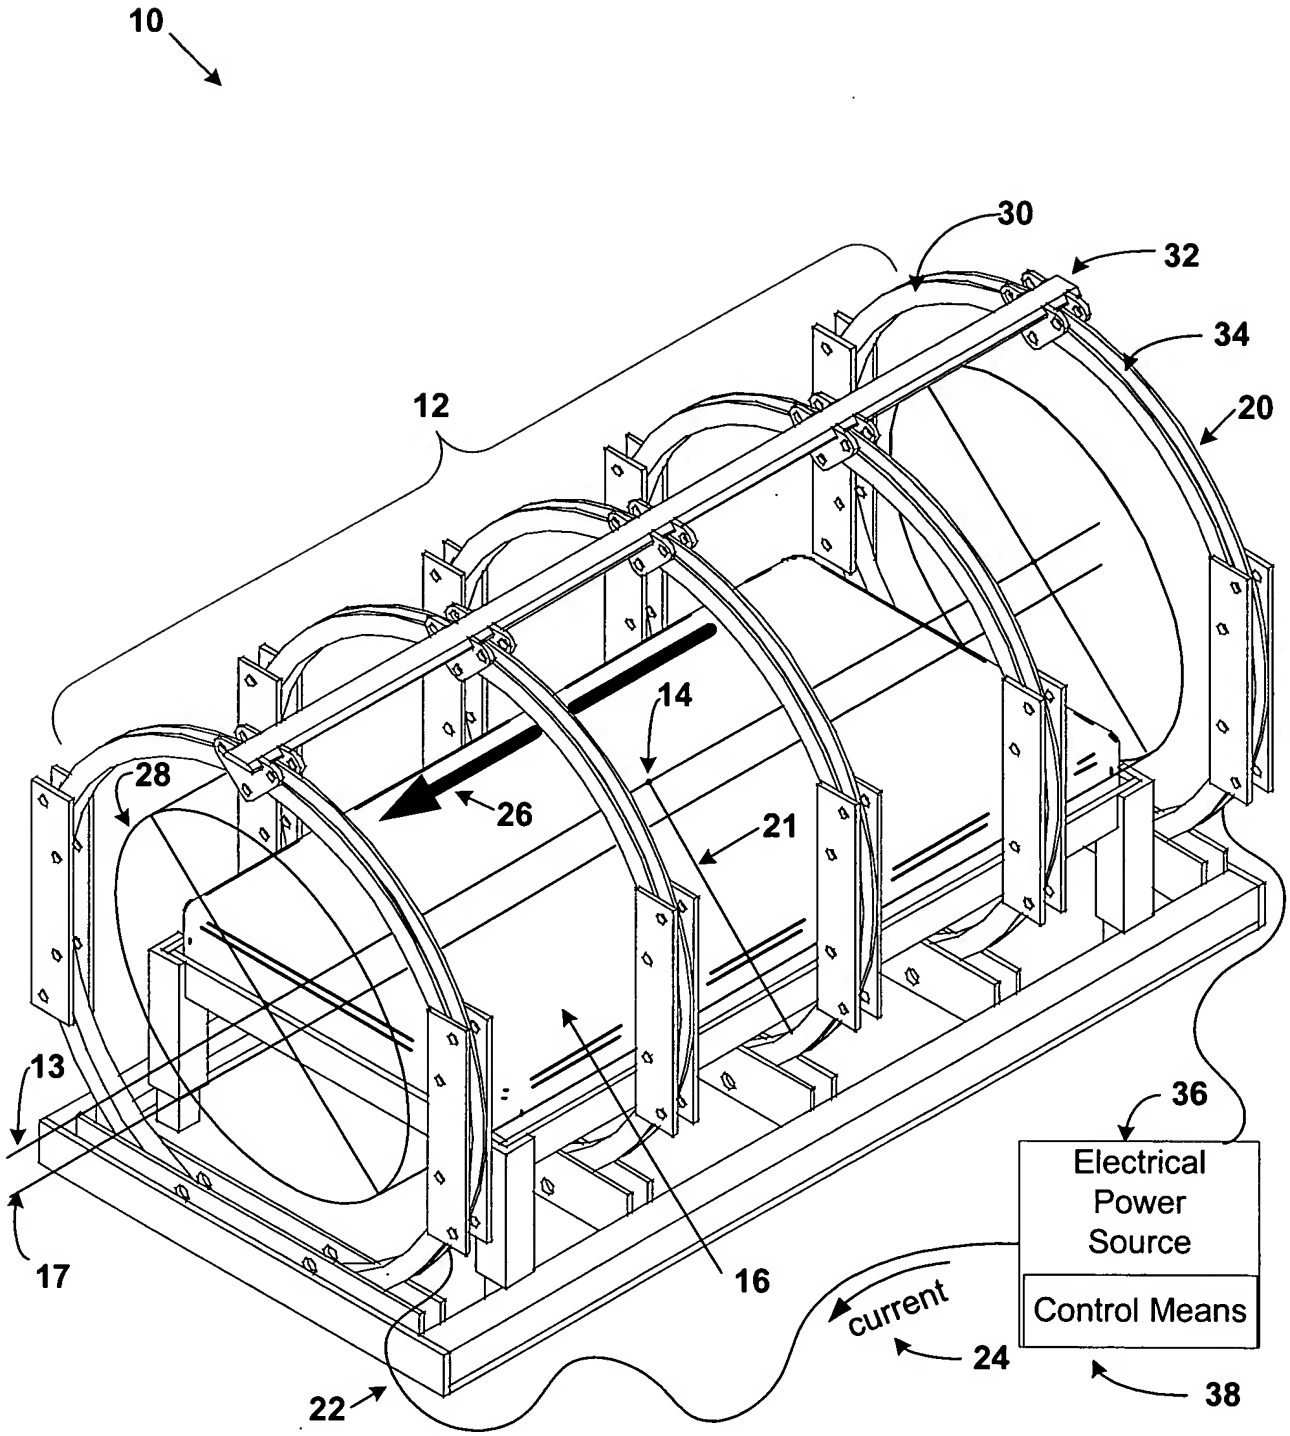

FIG. 1
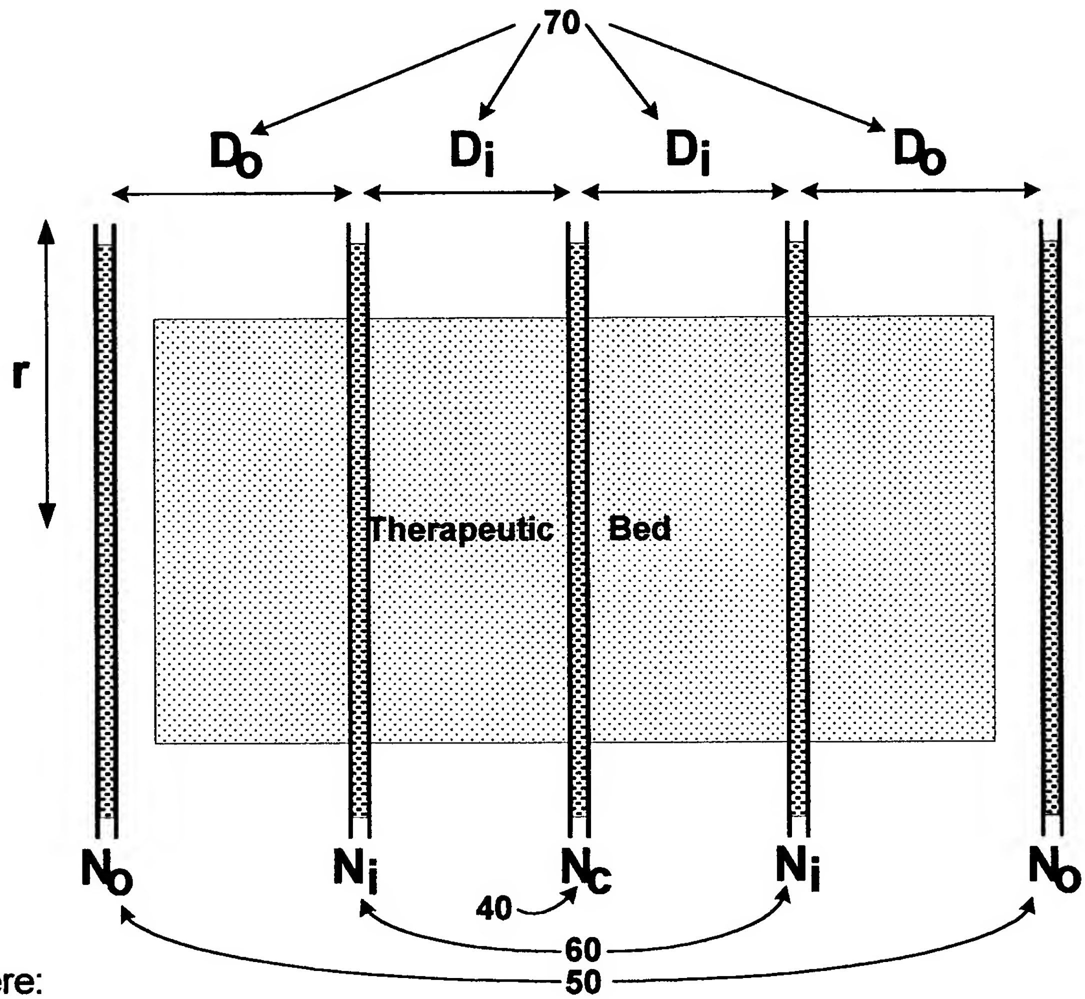
Orthogonal View of Pr s nt Invention



Where:

D_o = Distance between each end coil and its adjacent coil

D_i = Distance between the center coil and each of its adjacent coils

r = radius of each coil

N_o = Number of turns of wire on each end coil

N_i = Number of turns of wire on each coil adjacent to an end coil

N_c = Number of turns of wire on the center coil

NOTE: All distances listed above are center to center distances

FIG. 2
Ov rh ad Vi w of Coil Spacings (for 5 coil system)

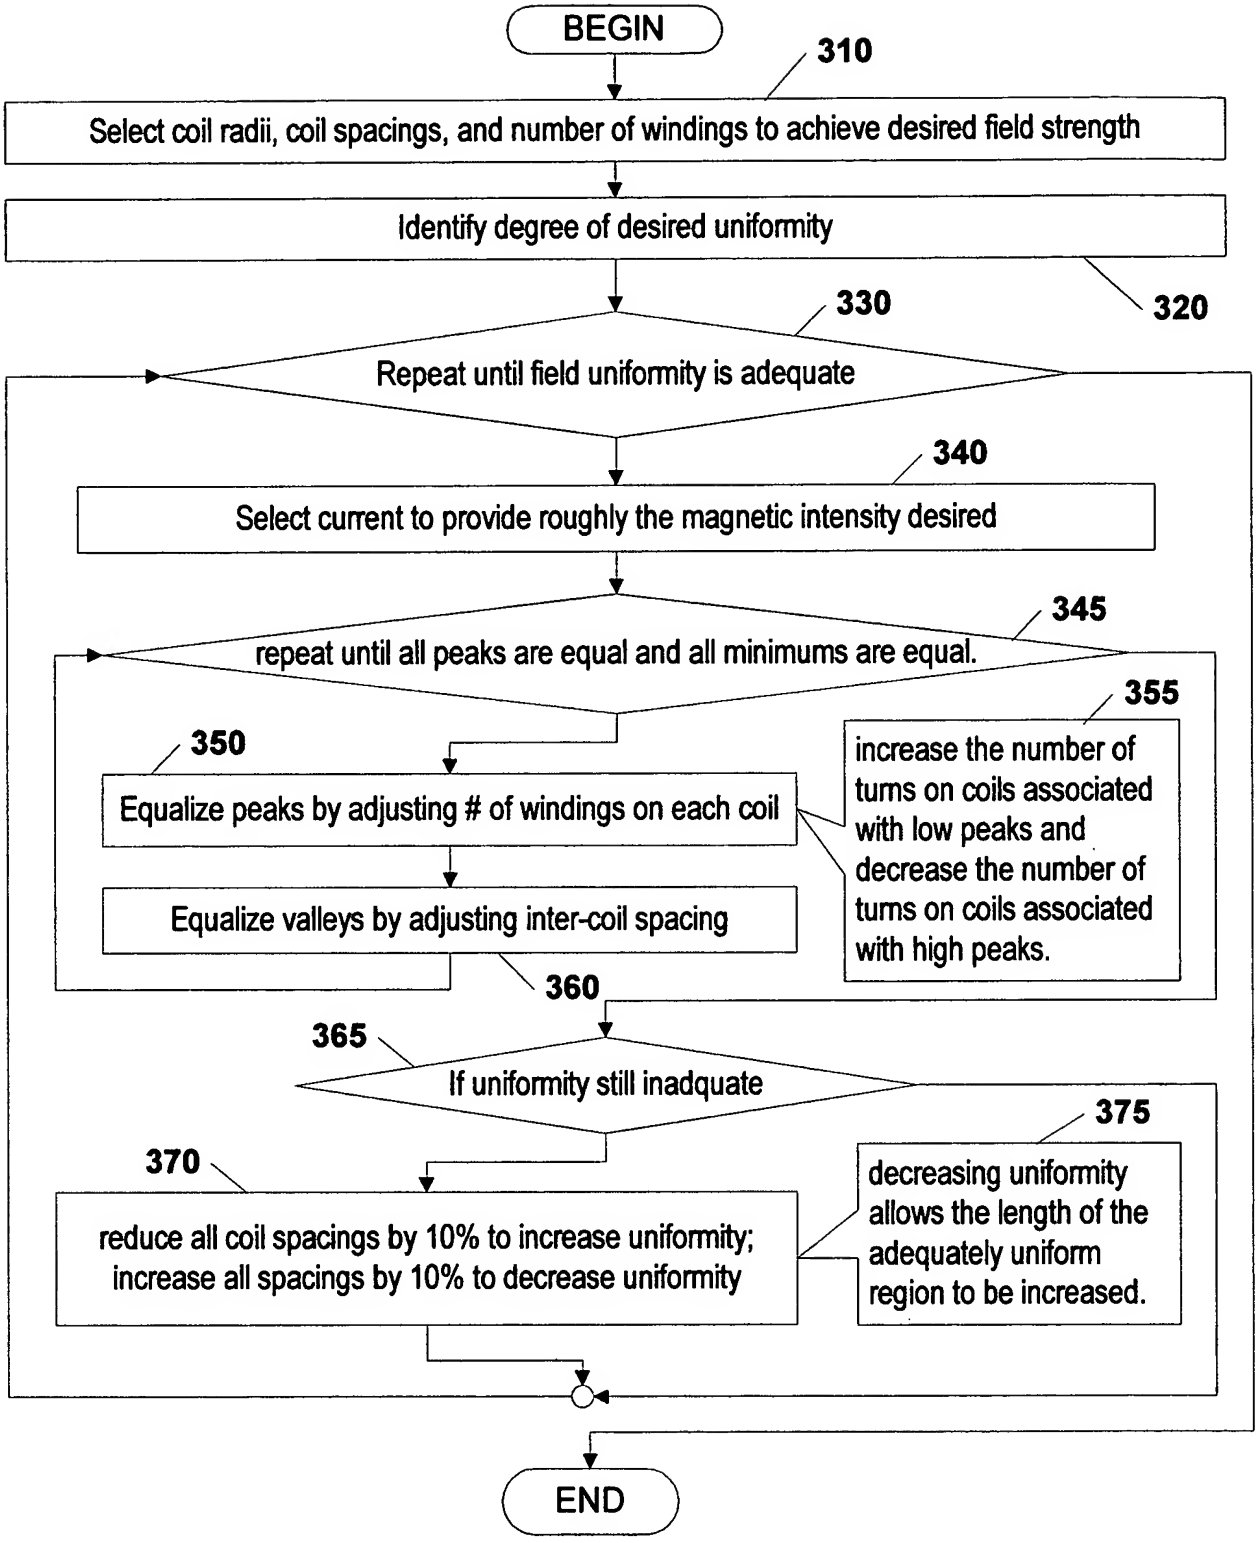


FIG. 3
Process for D v loping an Acceptably Uniform Fi ld in a Polycoil System

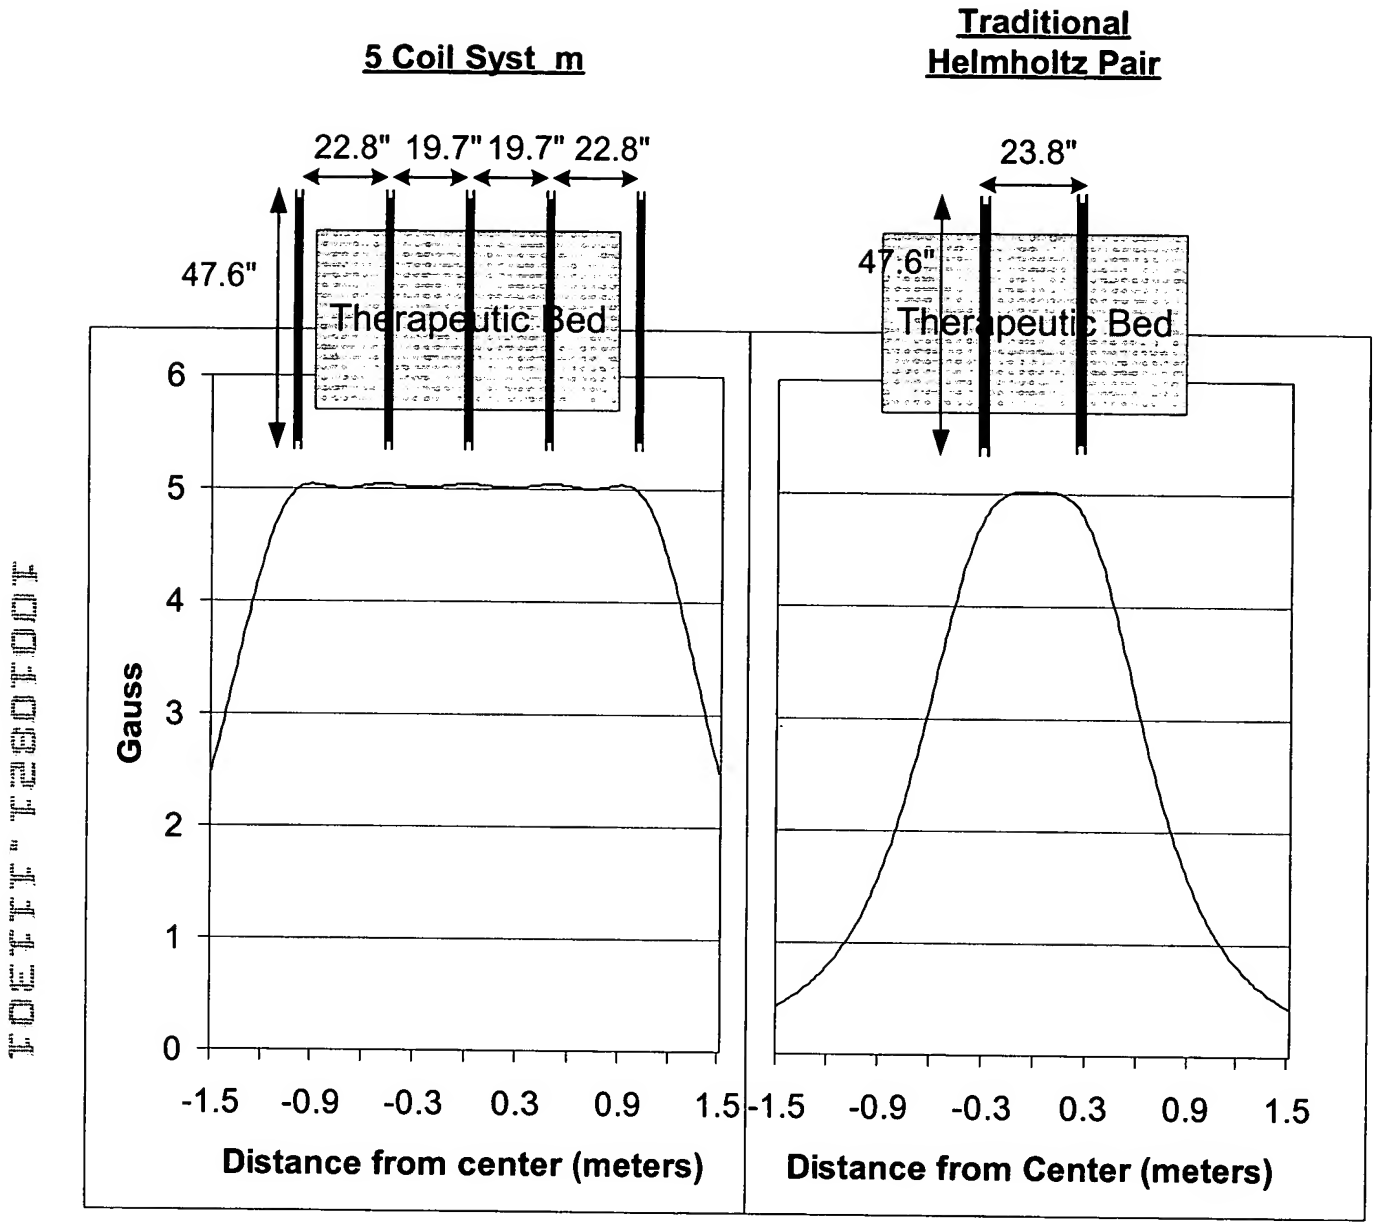

FIG. 4
Overhead View of Coil Spacings
(for 5 coil system and for Traditional Helmholtz Pair)

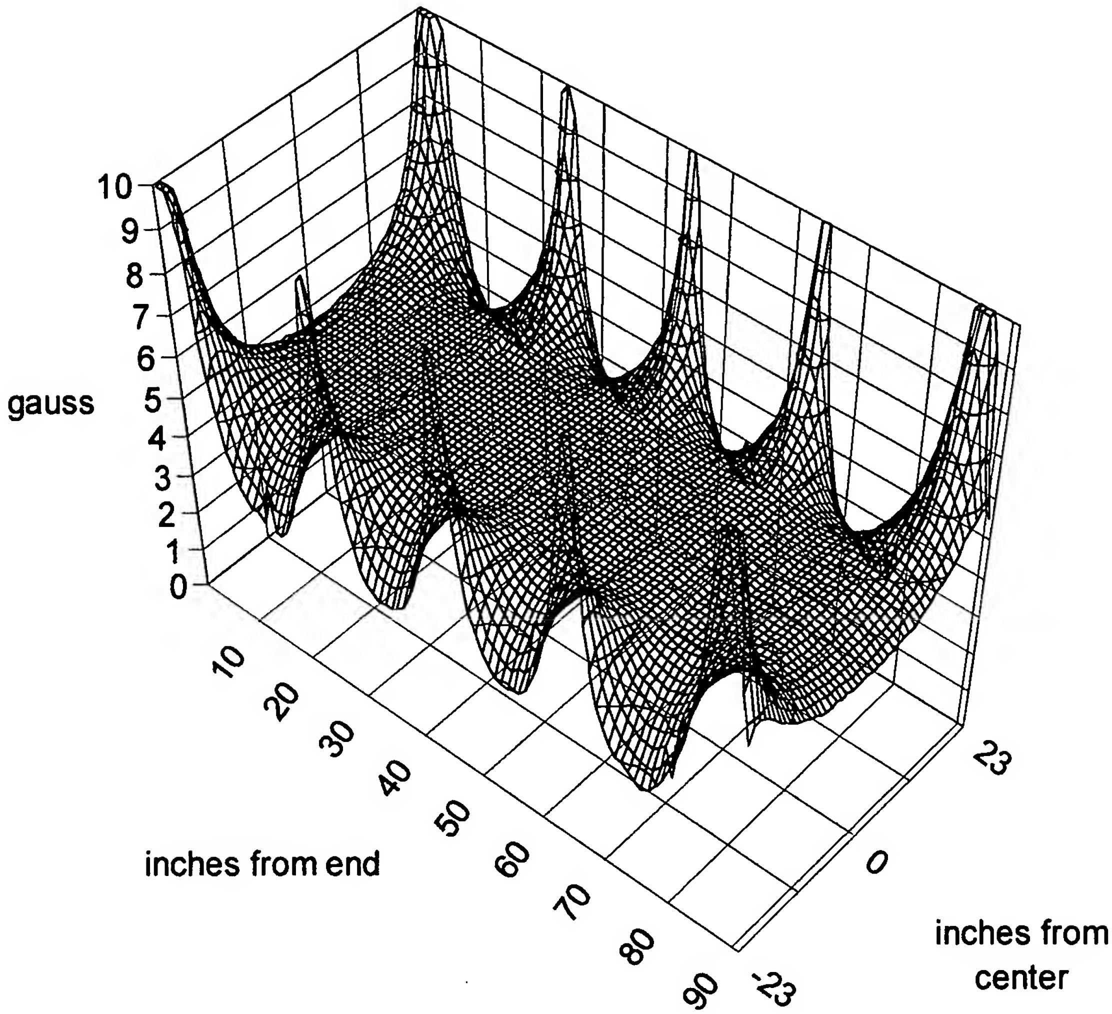

FIG. 5
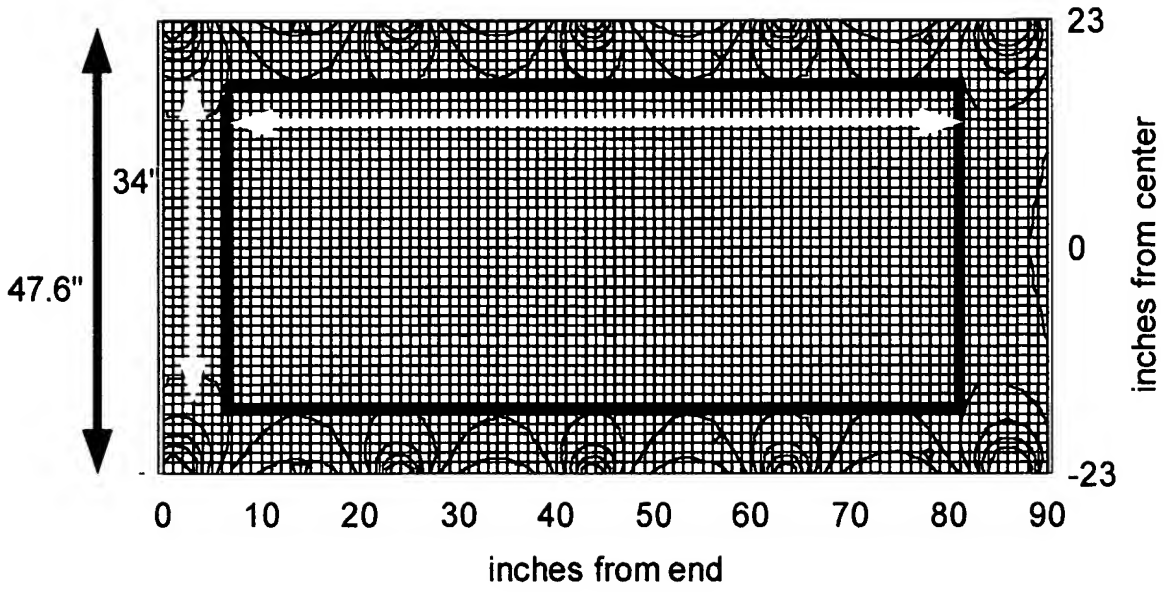
Magnetic Field Strength of Longitudinal Component



Each curved line = change of 1 Gauss

34"/47.6" = 71% of diameter of patient surface has a substantially uniform (i.e., 4.5-5.5 Gauss) field strength

FIG. 6
3-D Surface Map of Magnetic Field Strength
